EGAC-ACCREDITED (CAB #120007) - VALID THROUGH 2028 - CAIRO, EGYPT

WHO WE ARE

Engineering integrity into every asset.

INSCO - International for Services & Constructions Company - is an Egyptian engineering-services company, incorporated in 2010 under Certificate of Incorporation No. 3566 and Commercial Registration No. 209632.

From our Cairo base we serve the petroleum, construction and industrial sectors with non-destructive testing, post-weld heat treatment, welding services and skilled manpower - delivered by our own engineers, with our own equipment: 16 fully-automatic 65 kW heat-treatment units and a complete NDT fleet including gamma (Ir-192 / Se-75), X-ray, UT, PAUT, MT, PT, eddy-current & MFL.

Work is executed to ASME, ANSI, AWS, API, BSI, EN, IIW, JIS and AISC - with a CQI-IRCA lead auditor inside the company and twenty years of management experience in QA/QC on Egyptian and international projects.

> *"Our clients do not buy tests - they buy certainty. Every report we issue carries the weight of our certifications and the signature of our engineers."*
>
> **- GENERAL MANAGEMENT, INSCO**

QUICK FACTS

- Established 2010 - Cert. of Inc. 3566/2010 - CR 209632
- Triple ISO-certified management system through 2028
- CQI-IRCA Lead Auditor on staff
- ASNT Level II team
- 16 x 65 kW automatic PWHT units - company owned
- Full NDT fleet incl. PAUT, RT (Ir-192/Se-75/X), MFL
- ENRRA-licensed radiation practices
- Listed on www.ndt.org international directory
- Cairo-based - nationwide mobilization - works abroad

20+	16	12	3

CORE DISCIPLINE

Non-Destructive Testing.

Complete method coverage under one certified system - company engineers, company-owned equipment, ready at your site.

VT Visual Inspection	**UT** Ultrasonic Testing	**RT** Radiographic Testing	**MT** Magnetic Particle Testing
PT Liquid Penetrant Testing	**PAUT** Phased Array UT	**PMI** Positive Material ID	**HT** Hardness Testing
HYDRO Hydrostatic Testing	**SR** Surface Roughness	**PC** Painting / Coating Insp.	**MFL/EC** Eddy Current & MFL

Manpower supply: certified crews for all welding activities and site utilities, mobilized under the same QC/QA discipline as our inspection teams.

OWNED FLEET

Gamma sources Ir-192 & Se-75, X-ray units, UT/PAUT instruments, MFL & eddy-current, hardness & PMI analysers, hydro-test and roughness kits - all company-owned and job-ready.

RECOGNITION

Listed on www.ndt.org - the international industrial NDT directory - with radiation practices licensed by ENRRA and completed works beyond Egypt.

12	1	100%	ASNT
method families	certified system	company-owned fleet	Level II personnel

METHODS & ACTIVITIES (1/4)

Every test, explained.

VT - Visual Inspection

ASME V Art. 9 - AWS D1.1 - API 570

Direct and remote visual examination of welds, components and structures for surface discontinuities, misalignment and corrosion - the first line of defence in any inspection plan. Executed with weld gauges, borescopes and lighting kits by qualified VT personnel.

UT - Ultrasonic Testing

ASME V Art. 4 & 5 - ASTM E797

High-frequency sound pulses are coupled into the material; reflections from internal discontinuities - lack of fusion, porosity, cracks - and wall-loss echoes are analysed on screen. Covers weld-volume inspection and thickness surveying.

RT - Radiographic Testing

ASME V Art. 2 - ISO 17636

Gamma (Ir-192, Se-75) or X-ray beams traverse the weld and expose film or digital detectors, revealing internal volumetric defects as density variations. Executed under ENRRA-licensed radiation-safety controls with demarcated controlled areas.

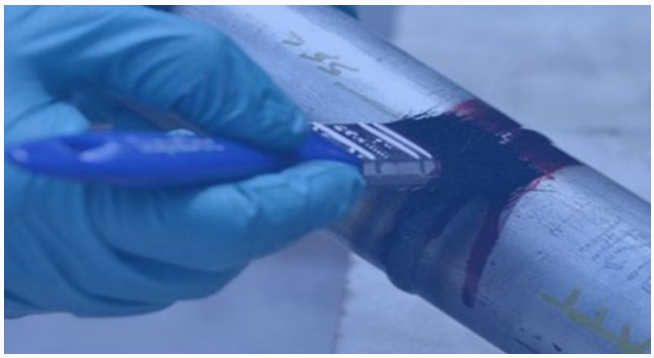

MT - Magnetic Particle Testing

ASME V Art. 7 - ASTM E709

The part is magnetized and iron particles applied; surface and near-surface discontinuities distort the magnetic field and collect particles into visible indications under white or UV light. Ideal for ferromagnetic welds, forgings and castings.

METHODS & ACTIVITIES (2/4)

Every test, explained.

PT - Liquid Penetrant Testing

ASME V Art. 6 - ISO 3452

A low-surface-tension penetrant enters surface-breaking defects by capillary action; after developer application the indications bleed out and become visible. The method of choice for non-porous metals where magnetic methods do not apply.

PAUT - Phased Array Ultrasonic Testing

ASME V Art. 4 App. - ISO 13588

Multi-element arrays steer and focus ultrasonic beams electronically, producing encoded, imageable scans of the weld volume in a single pass - faster coverage, richer data and permanent records compared with single-probe UT.

PMI - Positive Material Identification

ASTM E572 - API RP 578

Handheld X-ray fluorescence identifies alloy chemistry in seconds, verifying that pipes, fittings and weld consumables match the specified grade - eliminating material mix-ups before, during and after fabrication.

HT - Hardness Testing

ASTM A956 - ISO 18265

Portable Leeb and UCI hardness measurements on weld metal, heat-affected zone and base metal verify material condition and the effectiveness of post-weld heat treatment, supporting fitness-for-service and code-compliance decisions.

METHODS & ACTIVITIES (3/4)

Every test, explained.

HYDRO - Hydrostatic Testing

ASME B31.3 - API 1104

Piping and vessels are filled and pressurized above design pressure with water while monitored for leakage and permanent deformation - the definitive proof of structural integrity and tightness before commissioning.

SR - Surface Roughness / Profile

ISO 8503 - ASTM D4417 - SSPC-PA 2

The anchor profile of blast-cleaned steel is measured with comparators and replica/profile testers to confirm the surface condition required for coating adhesion - a mandatory hold point before any primer is applied.

PC - Coating / Painting Inspection

SSPC-PA 2 - ISO 19840 - NACE SP0188

Dry-film thickness, adhesion and holiday (spark) testing verify coating continuity and specification compliance, protecting assets against corrosion in service; pinholes and skips are located and marked for repair.

EC / MFL - Eddy Current & Magnetic Flux Leakage

ASTM E426 - ASTM E2944 - API 653

Eddy-current probes detect surface cracks and tube-wall loss on conductive materials; magnetic-flux-leakage scanning maps corrosion and metal loss across tank floors and pipe bodies at production speed.

Every test, explained.

PWHT - Post-Weld Heat Treatment

ASME B31.3 - AWS D1.1 - API 537

Controlled heating, soaking and cooling cycles relieve welding residual stresses and restore toughness: 16 automatic 65 kW units with independent programmers and recorders execute code-compliant charts with thermocouple verification.

WELD - Welding & Manpower Supply

ASME IX - AWS D1.1

Certified welding crews and site-utility manpower mobilized under INSCO engineers and QC/QA procedures - welders qualified to project codes, supervised inside the same certified management system as our inspection teams.

QC/QA - Management & Equipment Rental

ISO 9001:2015 - project ITPs

Inspection and test plans, hold-point witnessing, documentation control and equipment rental with operators: a single accountable interface for quality control and quality assurance across petroleum and construction works.

STANDARDS LIBRARY

Work is executed to ASME, ANSI, AWS, API, BSI, EN, IIW, JIS and AISC - or to contract-specified equivalents. Method procedures, acceptance criteria and reporting formats are issued per project Inspection & Test Plan and referenced on every report we deliver.

PHOTO SOURCES

Method photographs in this section are technical reference imagery from NDT equipment and service manufacturers, illustrating each technique as performed in the field.

BEYOND INSPECTION

Heat treatment, welding & field services.

POST-WELD HEAT TREATMENT - 16 x 65 kW AUTOMATIC UNITS, COMPANY OWNED, STORED IN CAIRO

Fully automatic heat-treatment equipment - 16 units of 65 kW with independent programmers and recorders - stocked in Cairo and ready to deploy to any location within Egypt, with completed works outside Egypt. One call mobilizes the complete chain: inspection, treatment and welding support.

Welding & Manpower Supply

Manpower for all welding activities and site utilities, working under our engineers and QC/QA procedures - crews mobilized with the same certification discipline as our inspection teams.

Petroleum Services

Equipment rental, site management, quality control and quality assurance (QC/QA) for petroleum operations - a single accountable contractor across the full welding-and-inspection chain.

16 x 65 kW	24/7	Cairo	3
automatic units	programmed cycles	stored & ready	countries served

WHY INSCO

Five reasons vendor committees say yes.

01

One supplier, full scope

NDT + heat treatment + welding support + manpower under a single certified management system - fewer interfaces, one accountability.

02

Ownership equals readiness

Every instrument and heat-treatment unit is company-owned and stored in Cairo - mobilization to any site in Egypt without rental-market delays.

03

An audited quality culture

A CQI-IRCA lead auditor inside the company, ASNT Level II technicians, QC/QA executed by company engineers, three ISO systems surveilled annually through 2028.

04

Recognition beyond borders

ENRRA-licensed radiation practices, listing on the www.ndt.org international directory, and completed works in Yemen, Afghanistan and the region.

05

Compliance you can file

Certificate numbers, issue and expiry dates published for direct verification with the accreditation body - vendor-file ready; full evidence in the annexes of this document.

ORASCOM CONSTRUCTION

Annex # 01

1- Equipment:

1-1) fully automatic heat treatment unit of 65 KW with:

1. Six independent controlling programmers each.
The programmers can be used independently the one from the other this independency gives the facility to run and record at the same up to 6 different cycles depending on the number of TC required.

The number of cycles and welds is determined by the dimension of the weld.

This technique is useful also for running Pre-Heating (if required) and Post Weld Heat Treatment cycles with the same unit at the same time.

1. Continuous voltage control.
2. Six points dot matrix temperature recorder with hourly printed data record on 180 mm width chart paper.
3. Thermocouple Attachment Unit.
4. Calibrator.
5. All necessary accessories:
   5.1 Heating elements (sufficient quantity of ceramic pads)
   5.2 Power cables (connections between the equipment and heating elements)
   5.3 Five way splitter cables.
   5.4 Compensating cables NiCr-Ni, 25m length.

2- Manpower:

The team per each unit consisting of:

(1) One technician + (1) one helper **depending on the volume of the work.**

Integration Agreement

Provision of NDT Inspection Services

FIRST PARTY

ALAROUBA DANFODIO PETROLEUM CO (ADPC) YEMEN
Banks St - Mukalla - R.O. Yemen

SECOND PARTY

INTERNATIONAL FOR SERVICES & CONSTRUCTION CO. (INSCO) CAIRO, EGYPT

Introduction

This Agreement, made and entered into as of this June 1, 2018 by and between **ALAROUBA DANFODIO PETROLEUM CO (ADPC) | YEMEN** (hereinafter referred to as "**The First Party**"), a corporation duly organized and existing under the laws of Yemen having its principal place of business in Yemen and **INTERNATIONAL FOR SERVICES & CONSTRUCTION CO. (INSCO) | EGYPT** (hereinafter referred to as "**The Second Party**") having its principal place of business in Egypt. Whereby, this agreement will cover different services required in Yemen market by the first party that are within the scope of the second party.

WHEREAS, the First Party is a company established under the laws of Yemen and engaged in contracting activities and Services in the field of Inspection and consultation Services with major clients in Yemen.

WHEREAS, the Second Party is a company established under the laws of Egypt and having all the required legal registrations and technical qualifications and accreditations.

WHEREAS, both parties have desire to maintain mutual agreement to coordinate with the First Party for its businesses in Yemen, and the First Party to extend its scope of businesses to the service as above that the Second Party will provide.

- **WORK LOCATION**

Work is required in Hadhramaut or other ADPC clients' locations within the ROY, as may be required by ADPC clients from time to time, as further described in this agreement.

The primary objective of this Contract is to arrange for the provision, on an as needed basis, of non-destructive testing ("NDT") services on a full-time rotational basis.

INSCO shall provide all Consumables, Goods, and Equipment required for proper performance of the Work as further specified in this agreement and subsequent INSCO quote and discussions thereafter.

INSCO shall provide the number and quality of Personnel as required for performance of the Work as further specified in agreement.

All Personnel, Equipment, and Consumables provided by INSCO under this Agreement must capable of performing the Work to a standard satisfactory to ADPC and it's clients, in its sole discretion. Equipment or Personnel mobilized to the worksite and deemed unacceptable by client shall be replaced as quickly as possible by INSCO, at INSCO's sole cost.

Page 1 of 5

Almasuda Sinopec Petroleum Co. (ASPC) - Yemen

Petroleum company operating in Barik / Mukalla, R.O. Yemen; first party to the agreement.

WHAT IT CERTIFIES / CONFIRMS

Integration agreement for the provision of NDT inspection services with INSCO.

Doc E-08 - source: merged_documents_10mb.pdf p.50 - scan orientation-corrected and optimized to (1237, 1754) px (approx. 150 dpi at A4).

- **NATURE OF WORK**

INSCO shall perform, as instructed by ADPC/Client from time to time, various types of NDT Work, including the following:

- the radio-graphic inspection of pipeline systems and facilities in accordance with ASME B 31.4 and ASME B 31.8; **(Temporarily replaced with PHASED ARRAY ULTRASONIC TEST - PAUT)**

- ultrasonic inspection of vessels and piping systems;

- non-destructive testing for welder qualification;

- magnetic particle and dye penetrant inspection services; and

- interpreting film to proper specifications and advising Client of whether the work inspected conforms to specifications or requirements.

INSCO shall also provide all required expertise and any other services not specifically mentioned herein, but which by reason of INSCO experience and capability, it knows to be necessary to ensure that the Work is properly performed.

ADPC clients expects the NDT Work requirements will be limited to occasional pipeline installation and piping repair work, welder qualification and UT testing and reporting for existing pipeline, piping, and vessel inspection. The quantity of Work required may increase or decrease at any time and, as further provided for herein, ADPC does not guarantee any quantity of Work to the Contractor during the Contract period.

- **QA/QC AND SAFETY REQUIREMENTS**

INSCO will implement a quality assurance ("QA") and quality control ("QC") program that has been reviewed and accepted by client. INSCO shall ensure that INSCO Group complies with such program at all times during the Term.

INSCO/ADPC will implement a safety and safety-training program for INSCO Group that has been reviewed and approved by Client. INSCO must present a safety or training document to establish that it has written safety procedures for the servicing, testing and running of the Equipment and that the procedures are available to all applicable Personnel. The documents should identify hazardous conditions, specify procedures to reduce risks and describe the use of safety devices.

- **REPORTING REQUIREMENTS**

INSCO shall use clients' accident and incident reporting system. All incidents, spills, or near misses involving clients', INSCO Group's, or any third party's personnel, property, plant, or equipment, shall be immediately reported to client through ADPC, irrespective of whether injury to personnel or damage to property or equipment resulted.

INSCO shall investigate the cause(s) of all work accidents and significant incidents involving INSCO Group or the Work and shall provide client with the results of the investigation. Client shall have the right to participate in the investigation at clients' sole discretion.

INSCO shall provide the following reports to ADPC on a monthly basis, within two (2) days of the end of each month, or at other such intervals as requested:
